

OvercurrentProtection
::detect

ZSCurrentProtection
::detect

Timers::get_Q

```
graph LR; A[OvercurrentProtection::detect] --> C[Timers::get_Q]; B[ZSCurrentProtection::detect] --> C;
```

The diagram illustrates two function calls, 'OvercurrentProtection::detect' and 'ZSCurrentProtection::detect', both of which point via blue arrows to a common target, 'Timers::get_Q'. The target box is shaded gray, while the source boxes are white with black borders.
